• JOHN BLUE COMPANY QUARTERLY NEWSLETTER •

THE JOHN BLUE COMPANY POLY-CENTRIFUGAL PUMP FAMILY EXPANDS WITH NEW MODELS AND POWER OPTIONS.

COMING SOON! All new, three-inch Poly-centrifugal pump to handle your fertilizer transfer needs. This pump is lightweight and ready to work with quick grab handles for easy mobility wherever needed on the farm. As with all John Blue Transfer pumps, a Viton wet-seal allows the pump to be operated dry without fear of damage. When operating at max capacity this powerful and durable pump is capable of pushing 375 gallons per minute at max flow. Please give your John Blue Sales and Support team a call for more information 1-800-253-2583.

AVAILABLE SPRING 2020:

Also, within our Poly-centrifugal pump family, the two-inch pump is now available with a Briggs & Stratton Engine in order to yield a more economical solution for the transfer of liquid product.

SPECS:

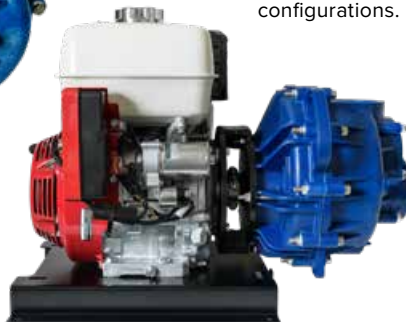

- 375 GPM Max Flow
- 45 PSI Max Pressure
- 3600 RPM Max Shaft Speed

FEATURES:

- Vac-u-seal impeller
- Double wet-seal assembly
- Fully-assembled from the factory
- Close-coupled shaft
- Chemical resistant materials:
 - Viton Packing and Cups
 - Ceramic Seats
 - Carbon Seal Faces
 - Stainless Spring and Cases

Available with gas engines and single-phase and three-phase electric motors in both TEFC and drip-proof configurations.

The two-inch and three-inch John Blue poly-transfer pumps are both great additions to any farming operation in need of a high-quality dependable pump for liquid transfer!

HY NEXT GENERATION PISTON PUMPS

John Blue's Hydraulically Driven (HY) NGP Piston Pumps continue to become the "go to" pump for variable rate fertilizer application. Because our pumps are unaffected by ambient temperature changes and coupled with unparalleled suction capabilities, the John Blue NGP-HY piston pumps should be your first choice when your customer requests variable rate fertilizer applications. There are multiple versions available, from the small NGP-4055-HYF (10.2 GPM) all the way to the workhorse NGP-9055-HY (68.4 GPM). Match any of these models with our hydraulic motor and PWM kit (116205-91 or 116205-91D) and be assured that you are selling the most reliable, robust, and accurate variable rate pump on the market today.

JOHN BLUE ORIFICE SELECTOR ASSEMBLY

John Blue's revolutionary Orifice Selector Assembly (SMPT-OSA4) makes not only changing orifices simple, but also saves your customer money. Our Orifice selectors come in a convenient package with 16 possible sizes and keep your hands clean while making adjustments to the application range. Not only will you not expose yourself to harmful chemicals when making an orifice change, but you won't waste valuable time looking for the correct or missing disc – it's already there! Changing your rate is as simple as A, B, C, D – simply rotate the cap to the appropriate orifice size. Combined with our industry leading Visagage II sight glass columns and electronic monitoring system (LBMS), you'll know for sure your row to row distribution is correct.

JOHN BLUE COMPANY EMAILS CHANGED

During our rebrand last year, our website and email domains also changed. PLEASE make sure that all email addresses are updated in your system to @johnblue.com. The old cds-johnblue.com email addresses will be phased out during 2020.
